

During the Deployment: Vista Troubleshooting Tip

In the case that During the Deployment fails to work properly under Windows Vista use the following steps:

- 1) Under 'All Programs' in the 'Start Menu', find the 'During the Deployment' folder
- 2) Locate and right click on the main application for 'During the Deployment'
- 3) Select 'Properties'
- 4) Click on the 'Shortcut' tab

You should now be able to launch the application the standard way. If you launch the application via a shortcut on your desktop, you will need to perform the same procedure for this shortcut as well.
